CHAPTER 5

MATERIALS, PRODUCTS, SUBJECT MATTER, AND SERVICES

The Work Performed component of MPSMS includes:

Basic Materials processed, such as fabric, metal, or wood.

Final Products made, such as automobiles; cultivated, such as field crops; harvested, such as sponges; or captured, such as wild animals.

Subject Matter or data dealt with or applied, such as astronomy or journalism.

Services rendered, such as barbering or janitorial.

MPSMS is the final link in a chain describing (1) what the worker does (Worker Functions); (2) what gets done (Work Fields); (3) to what (MPSMS).

The determination and assignment of an appropriate MPSMS code and title for a specific job is essential (1) to place the job in its occupational group of the DOT and (2) to contribute to an understanding of the basic knowledge required of the worker. The assigned Work Field(s) and MPSMS together answer the question, "What does the worker need to know?"

MPSMS categories are closely related in organization and content to categories in the Standard Industrial Classification Manual (SIC) and to educational classifications of subject matter. Some categories of MPSMS are tangible and some are intangible. Categories of tangibles cover materials and products, such as Grains and Alcoholic Beverages. Categories of intangibles involve specialized knowledge or services, such as Dramatics and Air Transportation, and cannot be expressed by listing a material or product.

ORGANIZATION OF MPSMS

The MPSMS component contains 48 groups subdivided into 336 categories. The groups and categories have three-digit identification code numbers. The code numbers for groups end in "0". The code numbers for categories have the same first two digits as the group in which they are contained with two exceptions. The groups of 560 Machinery and Equipment, except Electrical and 700 Architecture and Engineering contain more than nine categories and require two sets of code numbers. Each group has a residual category with a code number ending in "9".

Assign the most appropriate MPSMS classification. If needed, as many as three separate classifications may be assigned. When a job's MPSMS corresponds to categories in different groups, assign the individual categories and their corresponding codes. When the job's MPSMS corresponds to three or more categories within the same group, assign the group code. When the job's MPSMS corresponds in general to the group but not to a specific category within it, assign the residual "not elsewhere classified" code.

Information contained in MPSMS groups and categories may be accessed through three indexes:

1. **MPSMS Groups:** This index provides an overview of the classification structure and lists the MPSMS Groups in numerical order according to Materials and Products, Subject Matter, and Services.
2. **Classifications, Definitions, and Examples of MPSMS:** This index provides a complete classification of the MPSMS groups and their categories. Following each group code and title is a brief explanatory statement defining the group's limits and broadly indicating the general occupations and industries included in that group. This is followed by a cross-reference statement that alerts the reader to related MPSMS found in other groups and indicates the distinction between the related MPSMS.

The codes and titles of the categories comprising the group are listed under each group definition. Additionally, many categories are illustrated by specific items in parentheses immediately following the category titles. These examples are not intended to be a complete representation of the individual categories but can be used as a guideline to determine whether a specific MPSMS is included in an individual category.

3. **Alphabetical Listing of MPSMS:** This listing of MPSMS and their corresponding codes is helpful in locating the appropriate group and category titles for MPSMS specifically named in the group or category titles, the group definitions, or the illustrative examples. Since the Alphabetical Listing does not always use the exact MPSMS title, the analyst must always use the code to locate the correct title as listed in the Classification Index.

PROCEDURE FOR ASSIGNING MPSMS

Select one or more categories that, together with the Work Field(s), best reflect the specific technology(ies) with which the worker is involved. If an appropriate category of MPSMS cannot be identified, locate the most appropriate **major group** and assign the "n.e.c." code that ends with "9". The codes ending with "0" should be used only to designate a generalized MPSMS or a combination of three or more categories in the group when the assigning of specific, i.e., not general, MPSMS is not appropriate.

Enter, in Item 8 of the JAR, the code(s) and title(s) of the MPSMS classification(s) selected.

When assigning MPSMS, apply the Sentence Analysis Technique (see Chapter 6) to avoid confusing MTEWA with MPSMS and to facilitate the assignment of a subject matter or service category.

The MPSMS classification for a given job is generally based on the overall purpose of the job, usually reflected by the primary knowledge required of the worker. In production jobs, the MPSMS classification can be a material or a final product; it is based on the end-product of the job and not the end-product of the establishment. For example, a fabric cutter in a furniture plant is assigned an MPSMS category in Group 420 Fabrics and Related, not in Group 460 Furniture and Fixtures. When the primary knowledge is in terms of a product being made, the product is rated. When the primary knowledge is in terms of a specific material being processed, the material is rated.

First-line supervisory jobs are usually assigned the basic MPSMS classification of the workers supervised. Repairer jobs are assigned only the Products classifications of the items repaired. Machine cleaning and lubricating jobs are assigned the Products classifications of the machines cleaned and lubricated. Teaching jobs that involve specific subject areas are assigned both the Subject Matter classifications of the specific subjects taught as well as 931-Educational Services; teachers who teach a range of subjects, such as elementary school teachers, are assigned only 931. When a Service classification is assigned, either a Subject Matter, a Material, or a Product classification should also be assigned, when possible, since it is the primary knowledge required of the worker that is depicted by MPSMS and not the environmental setting. Commodity-sales jobs are assigned the appropriate category under 880-Merchandising Services, as well as the Material or Product classification for the item sold; if a variety of commodities are sold, only 880 is assigned.
